DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of group II, claims 7-9, in Paper No. 6 is acknowledged. The traversal is on the ground(s) that "an undue burden would not be placed upon the Examiner to maintain both groups of claims in a single application". This is not found persuasive because as pointed out in paper No 5, the two inventions have garnered separate status in the art as expressed by their different classifications. This is sufficient to demonstrate an undue burden.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 7-13 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 08211398 (hereafter Hitachi). Hitachi discloses an electro-optical device having a conductor pattern constituted by a plurality of elongated conductors (9) formed in parallel to each other on a base (1), further having a dummy pattern constituted by a plurality of dummy conductors (e.g. 8D1) formed in an area on said base where said conductor pattern is not formed, and in which electro optical material (liquid crystal) is disposed on said conductor pattern, wherein said plurality of dummy conductors disposed in an array direction of said

Art Unit: 2841

plurality of elongated conductors to constitute said dummy pattern are mutually separated in an extending direction of said plurality of elongated conductors [claims 7, 8], wherein at least two of said plurality of dummy conductors disposed in the array direction of said plurality of elongated conductors are each mutually electrically separated in an extending direction of said plurality of elongated conductors [claim 9], wherein each of said plurality of dummy conductors being mutually electrically separated in the array direction of said plurality of elongated conductors have a dummy conductor width and a dummy conductor spacing equivalent to a width and a spacing of each of the elongated conductors [claim 10], wherein said plurality of elongated conductors formed in parallel to each other have a fixed pitch [claim 11], wherein said plurality of dummy conductors being mutually electrically separated in the array direction of said plurality of elongated conductors have a dummy conductor pitch equal to the fixed pitch of the plurality of elongated conductors [claim 12], wherein said plurality of elongated conductors and said plurality of dummy conductors are selected from the group consisting of electrodes and wiring lines formed on said base [claim 13].

Allowable Subject Matter

Claims 14-17 are allowed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following documents disclose electro optical circuits with dummy patterns:
